RIGTRAK™

BEST PRICED RIG MAT ON THE MARKET

Manufacturing RigTrak™

RigTrak™ is brilliantly designed to perform as a rig mat on a drill site, as a temporary access road, and as pads on many types of construction sites. Hardwood inserts can easily be replaced as they experience wear and tear on job sites, making this rig mat the best value on the market - bar none!

Pay less up front and use it longer!

The vertical beams are welded to form a strong base frame to support horizontal beams.

Horizontal beams are composed of round pile and tole steel.

The primary frame is welded with a reinforced plate, giving this rig mat the strength your job site requires.

The steel frame is painted and hardwood inserted.

The RigTrak™ Wood Replacement Door System provides an easy & safe way to replace wood.
